

Transforming the landscape of healthcare for future generations

Carestream Health, Inc., is a dynamic company that leverages 100-plus years of market leadership and an innovative suite of solutions to meet the critical needs of the markets it serves:

- Medical imaging and healthcare IT
- Dental imaging and practice management software
- Molecular imaging
- Non-destructive testing

Fulfilling a promise to customers

Carestream Health's promise is helping customers do their jobs better, faster and more cost effectively. And we deliver on this promise everyday. Medical providers large and small—from clinics and single hospitals to large networks and even entire countries—are advancing their radiology and IT systems using solutions from Carestream Health's medical businesses.

Our dental business continues to thrive in providing oral health professionals around the world with leading dental imaging and practice management products. Our molecular imaging business sits at the forefront of preventative and predictive medicine through the pioneering work performed by tens of thousands of researchers using our technology.

We also serve industrial markets with our non-destructive business, enabling customers to capture high-quality images for applications such as aircraft inspection, assemblies, castings and forensics.

The company's origin: In 2007, Onex Corporation purchased Eastman Kodak Company's Health Group and established it as an independent company: Carestream Health. Our business pioneered many innovative products that remain the "gold standard" today. In key areas of our business, we continue to use the Kodak brand on select products under a special licensing agreement.

2009 revenue: Approximately \$2.5 billion

Employees: Approximately 7,300 worldwide

Geographic scope: 150 countries

Chief Executive Officer: Kevin J. Hobert

Headquarters: Rochester, NY USA

Website: www.carestreamhealth.com

History: Became an independent company in 2007

We're a market leader

- We have thousands of healthcare information management solutions—such as RIS/PACS, eHealth Managed Services and more—installed worldwide
- We are one of the top providers of new computed radiography (CR) systems in the U.S. and Canada, and are a key player in the digital radiography (DR) systems market
- Our dental digital radiography equipment and practice management installed bases, respectively, are among the largest in the world
- Our molecular imaging products—digital molecular imaging systems, imaging agents, and film—are ranked among the top three in their markets
- Our Non-Destructive Testing business has more than 50 years' experience serving industrial safety and inspection markets
- We are the world leader in all categories of film: digital output, radiology, mammography, dental and molecular imaging
- We own more than 1,000 patents for medical and dental imaging and information technology

How we serve customers

Medical imaging & IT

Scalable solutions for every step of diagnostic imaging—from exam ordering, image capture and diagnosis to results distribution, billing and beyond.

- More digital choices for imaging—from general radiography to specialty applications like mammography, oncology, orthopedics and CAD
- Integrated RIS/PACS and information management solutions that combine images and patient information for processing, diagnosis, sharing and storage
- Flexible CR and DR solutions that solve workflow, budget and space challenges while reducing procedure times
- Market-leading laser imagers for printing medical images of all types: CT, MRI, ultrasound, CR and DR
- A broad range of professional services including project and remote management, as well as training

Dental systems

Innovative imaging products that capture, process, print, view, store and send dental images—ranging from complete digital solutions to traditional x-ray film products.

- Market leading intraoral and extraoral digital X-ray equipment and imaging films
- Intelligent, intuitive dental imaging and practice management software

Molecular imaging

In vivo and *in vitro* optical molecular imaging and pre-clinical PET/SPECT/CT solutions for life science and molecular biology research.

- Complete solutions that include digital capture systems, image analysis software, imaging agent chemistry and traditional scientific films for sensitive, high-performance and reliable imaging solutions

Non-destructive testing

High-quality products for a wide range of industrial applications including aircraft inspection, assemblies, castings and forensics—just to name a few.

Our parent company

Carestream Health is proud to be part of the Onex family of companies. Onex, one of Canada's largest and most respected corporations, owns a group of autonomous companies that includes Celestica, Hawker Beechcraft and Skilled Healthcare Group.

Onex Corporation trades publicly on the Canadian stock exchange. It ranked number 386 on the 2008 Fortune Global 500 list of the world's largest companies.
